

TECHNICAL SKILLS

Pentesting: Kali Linux, Burp Suite, Nmap, Metasploit, Nessus

Network: Wireshark, OPNsense, Active Directory, TCP/IP, DNS

Cloud: AWS IAM, Security Groups

Forensics: Ghidra, Cutter, Memory Analysis

SOC: SIEM concepts, Splunk, Log Analysis

OSINT: Passive/Active Recon, Footprinting

Dev: Python, Java, SQL, C/C++ (basic)

FOCUS AREAS

Ethical Hacking

SOC & Network Monitoring

Digital Forensics

Cloud Security

CTF Challenges

HIGHLIGHTS

8 hands-on projects

3 industry certifications

CTF challenger

Personal Kali Linux lab

OTHER DETAILS

Languages: English, Hindi, Gujarati

Open to internships

DIYA PATEL

Cybersecurity Student | Gujarat, India

+91 8140110297 · diyapa0721@gmail.com

linkedin.com/in/diya-patel-ab29a730b · github.com/diyapa0721 · diyapa0721.github.io/my-portfolio

Cybersecurity student at Gujarat University who learns by building: virtual network labs, an OPNsense firewall, Active Directory attack labs, Python security tools and hackathon projects. Currently strengthening SOC, networking and defensive skills, and looking for an internship to contribute to real security work.

PROJECTS

Netric AI – AI-Assisted Network Scanning & Alerting · Hackathon

Network Scanning · AI-Assisted Development · Security Alerts

- Turns scan findings into actionable security alerts to improve network visibility.

OPNsense Multi-VM Network & Firewall Lab · Home Lab

OPNsense · Windows Server · Ubuntu · Kali Linux

- Built a segmented lab, configured firewall rules, reviewed logs and fixed connectivity issues.

Web Vulnerability Scanner · Ongoing

Python · XSS/SQLi · Web Security

- Multi-phase scanner built from scratch, detecting XSS, SQL injection and more.

Active Directory Attack Lab · Complete

Windows Server · VMware · Active Directory

- Built a domain with Group Policy and users, then simulated privilege escalation and lateral movement.

WiFi Phantom: Attack & Defense · Complete

Wireless Security · Social Engineering · Threat Detection

- Simulated a rogue WiFi attack, then built a custom threat detection and blocking system.

Firewall Rules Tool & Brute-Force Login Simulator · Python

Rule Validation · Auth Testing · Networking

- Allow/Deny rules engine by IP, port and protocol; controlled brute-force simulation exposing authentication weaknesses.

EXPERIENCE

Independent Cybersecurity Projects & Home Labs — 2025 – Present

- Run a personal Kali Linux lab for controlled vulnerability analysis and penetration testing.
- Study SOC workflows, traffic analysis and alert triage through home-lab practice.
- Solve CTF challenges in cryptography, web exploitation and reverse engineering.

EDUCATION

I.M.Sc. in Cyber Security & Forensic Science — 2024 – Present

Gujarat University, Gujarat, India

- Network security, digital forensics, ethical hacking, cryptography, secure system architecture.

CERTIFICATIONS

Foundations of Cybersecurity – Google / Coursera — May 2025

Cybersecurity Analyst Job Simulation – Tata / Forage — Nov 2025

AWS Security Fundamentals – Amazon Web Services — Mar 2026
